FOR IMMEDIATE RELEASE: Friday, May 8, 2009

## **RedSky Announces New E911 Service for Cisco Emergency Responder™ v7.0**

***RedSky's E911 Anywhere™ service combines with Intrado V911™ to protect  
Cisco IP phone and softphone users***

Chicago – Cisco customers can now purchase enhanced 911 (E911) protection as a monthly service to protect even their most mobile workers. RedSky Technologies' E911 Anywhere™ service supports new capabilities in Cisco Emergency Responder™ (CER) v7.0 that enable real-time location updates for Cisco IP phones and softphones.

The E911 Anywhere service integrates seamlessly with CER v7.0 to capture location updates in real time and validate them against the Master Street Address Guide (MSAG). All 911 calls are sent via IP or a PSTN interface to E911 Anywhere, which then sends the call and the location information of the caller to Intrado's V911™ service for routing to any PSAP in the United States. No additional hardware is required.

E911 Anywhere also accepts 911 calls from Cisco Unified Communications Manager.

A new law taking effect July 1 in Massachusetts brings to 15 the number of states requiring organizations operating a multi-line telephone system (MLTS) to provide E911 service to employees, visitors and residents. In addition to the public safety implications, providing E911 protection also helps organizations manage their liability risk.

- more -

To make E911 implementation simple for customers, RedSky professional services provides consulting, implementation, testing and Level 1 support as well as monthly billing for the service.

For more information on RedSky's E911 Anywhere service, contact Ken Rosko, RedSky's Cisco channel director at 312-432-5935 or [krosko@redskytech.com](mailto:krosko@redskytech.com).
